

Help for using the CD/DVD label template.

The template is a **layered pdf file** suitable for using in **Photoshop**.

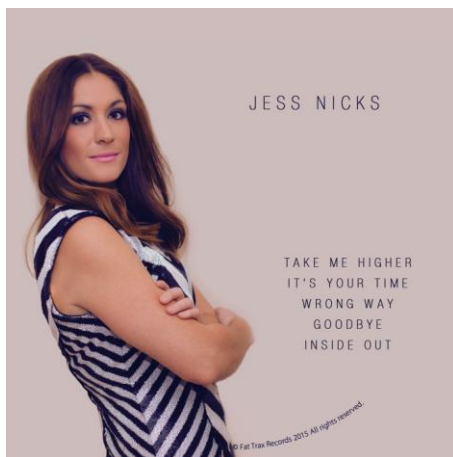

The layers in the template are **masks** to make it easy to insert and lay out your CD artwork.

When you have prepared the artwork in the template you need to **make all of the masks invisible** so that what you see is a **square image**. This is so that the artwork has the correct bleeds for printing.

If your image still looks like a **round CD** with a hole in the centre **you have not turned off the masks**.

Save the square image as a the best quality jpg file and send it to us.

The image should look like this.....
